

AP STYLE 718

Style 718 is braided from pure Teflon fibers, and then treated with a Teflon suspensoid. An inert high temperature lubricant is added, making 718 suitable for high-speed pump service. Style 718 is soft, pliable packing, allowing for fine gland adjustment, thereby minimizing the leakage of an expensive or hazardous product. Because Teflon is chemically inert, this packing will provide excellent service in highly corrosive chemical environments.

Style 718 works best as a pump packing and recommended for use with chemicals, acids, and steam applications. Style 718 is available as individual rings, combination sets, and in bulk.

Standard Sizes

Size	1/8	3/16	1/4	5/16	3/8	7/16	1/2	9/16	5/8	3/4	7/8	1
Ft/Lb	75	36	21	13	8.8	6.8	5.4	4.1	3.4	2.2	1.8	1.2

SPECIFICATIONS

Maximum Temperature
-400° F to 500° F

Maximum Pressure
2000 PSI in Valves
300 PSI in Pumps

Maximum Shaft Speed
1500 FPM

Ph Range
0-14

Construction
Lattice Braid
